● ABOUT ME

Frontend developer with 5+ years shipping consumer-facing web and mobile products in React, Flutter, Next.js, TypeScript, Vue.js, and React Native. Specialized in building reusable, configuration-driven components and design systems, documented in Storybook, that let teams iterate on features fast, and in turning product requirements and Figma handoffs into polished, accessible, production-ready UI. Experienced with e-commerce, payments, and real-time flows, performance optimization at scale, legacy refactoring, and Agile delivery backed by CI/CD, TDD/BDD, and A/B testing, with a habit of mentoring teammates along the way.

● WORK EXPERIENCE

01/12/2025 - CURRENT

FREELANCE FRONTEND DEVELOPER | SELF-EMPLOYED

- Delivered freelance frontend development for clients using React, Next.js, and TypeScript, building responsive, component-driven interfaces from design handoff through to production.
- Expanded into native iOS/Android development (Swift/Kotlin), transitioning Oye Cab from its original Flutter build to a native rebuild, and shipping Noor · Soul Tracker (Apple Watch, iPhone, iPad) to the Apple App Store.

10/10/2024 - 15/10/2025 - REMOTE

SENIOR FRONTEND DEVELOPER | STACKFINITY

- Partnered with designers and product owners to translate requirements and Figma/Adobe XD handoffs into pixel-accurate, accessible UI (Material 3, Apple Human Interface Guidelines), building reusable, configuration-driven components and design systems, documented in Storybook, for rapid feature iteration.
- Built and shipped cross-platform Flutter and React Native apps across language-learning, healthcare, staff-scheduling, transport, and waste-management verticals — including Sentential, Rosterify, Oye Cab, and TrackZone – Smart Ends; releasing to the Apple App Store and Google Play.
- Integrated RESTful APIs and PostgreSQL backends; implemented secure flows; Stripe payments, OTP verification, and encrypted real-time messaging.
- Drove performance optimizations (lazy loading, Redux/Provider state) and used analytics to resolve UX pain points, improving engagement.
- Provided informal mentoring and code review support to junior teammates, helping maintain consistent code quality and Agile delivery pace across the team.

17/11/2022 - 30/09/2024 - LAHORE, PAKISTAN

SOFTWARE ENGINEER | DEVSINC

- Built scalable web and mobile apps in React, React Native, and Node.js, delivering +40% performance improvement and +30% engagement lift.
- Built and maintained the full frontend of iShowroomPro, a CMS-driven digital showroom platform, in Vue and Ionic over 1.5 years, taking full ownership of UI architecture, component design, and feature delivery.
- Translated complex design requirements into reusable Vue components, collaborating closely with backend teams on an API-driven architecture.
- Delivered state-managed, testable UI with Redux and Zustand, and SSR/SEO optimised web experiences; integrated .NET APIs in Agile teams at 95% on-time delivery.
- Set up Dockerized environments and Jenkins CI/CD pipelines; worked from Figma handoffs to brand and accessibility standards across client products.
- Shipped React Native features for BeautyPass, a high-profile fashion and influencer lifestyle app with a large active user base.

10/11/2021 - 12/11/2022 - LAHORE, PAKISTAN

FRONTEND DEVELOPER AND QUALITY ASSURANCE | ACE INTERNATIONALS

- Built and tested responsive React apps; authored Cypress E2E/regression suites, cutting manual QA ~50% and QA overhead ~40%.
- Ran usability testing and performance audits, improving UI responsiveness by up to 60%.
- Conducted cross-browser and cross-device compatibility testing, identifying and resolving UI inconsistencies before release.

01/10/2020 - 10/09/2021 - LAHORE, PAKISTAN

SOFTWARE ENGINEER | STACKFINITY

- Built mobile-first React Native and Flutter apps with offline-first architecture — +35% UX, ~50% bundle size.
- Integrated REST with optimized state (Redux, React Query, Provider), reducing latency ~20%.

● SKILLS

Mobile

React Native | Flutter | Expo | React Navigation | Provider State Management | Push Notifications | Shared Preferences | Ionic | React Formik

Frontend

React (Advanced) | Redux | Redux Toolkit | Formik | TypeScript | Styled Components | JavaScript | Vue.js | PHP | SCSS | Next.js | CSS Modules

Testing & DevOps

Cypress | Unit & E2E Testing | TDD/BDD | Git/GitHub | Jenkins CI/CD | A/B testing | Azure DevOps | AWS | Docker

Backend & Data

Express.js | Node.js | MySQL | Nest.js

Design-to-code

Figma | Adobe XD | Material UI | Material 3 | Apple HIG | Storybook

● PROJECTS

BeautyPass (React Native) Lifestyle platform connecting fashion models with brands for mutual promotion.

Mastery / MasterMind Mobile App (React Native) Logistics app helping long-haul drivers with routing, ETAs, and offline-first compliance.

XiltriX (React) Cloud SaaS for real-time lab-environment monitoring and sensor analytics.

Sentential (Flutter) Language-learning app that teaches you to build natural sentences, not just memorize words.

Rosterify (Flutter) Staff shift scheduling and team rostering with real-time sync.

Khata at Home (Flutter) Offline-first ledger and multi-currency expense tracker.

Noor · Soul Tracker (Swift/Kotlin, native iOS & Android) Spiritual wellness tracker turning daily worship into a single soul score.

Oye.Cab Taxi-booking app with advance reservations, fixed fares, real-time tracking, and secure payments; originally built in Flutter at Stackfinity, later rebuilt natively (Swift/Kotlin) during freelance work.

TrackZone – Smart Ends (Flutter) Smart-bin sensor and camera-AI field app for the waste and recycling industry, using the HERE Maps SDK for in-app routing and navigation. Live in Belgium.

IshowroomPro (Vue / Ionic) CMS powering dynamic digital showrooms across mobile and web.
